Archeological Heritage. Results of Mexican observations will appear later in Spanish.

The problem consists of growing theft of museum-type items, especially critical where exploration still produces artifacts from earlier civilizations.

The work on thefts and illegal exports in India is conducted by the Central Bureau of Investigation, an agency which investigates thefts, maintains a data bank on these, and publishes particulars of crimes. Customs officials have been empowered to aid in enforcement against smuggling treasures or artifacts. The Indian Penal Code has adopted a definite position on theft or possession of stolen goods, presuming that a possessor is accountable for acquisition of same.

Field observations by Giuliana Luna, of the UNSDRI staff, indicate that in Italy the *Sovraintendenza* may have archeologists to advise them, but light punishment or circumvention of the law deters proper protection of articles or diggings. Clandestine excavations are conducted by people who find in the sale of antiques or art objects their only means of subsistence; they are aided by entrepreneurs inside or outside the law, skilled in secretive methods. "The present system cannot cope with a situation which by now has reached the stage of chronicity."

Workshop participants agreed that international legal remedies and enforcement of legislation are necessary for prevention of these activities. (A 1971 ICPO/Interpol resolution was passed at its General Assembly Session, calling for increased collaboration.)
